## Mission Statement

The Cameroon Baptist Convention Health Board seeks to assist in the provision of care to all who need it as an expression of Christian love and as a means of witness in order that they might be brought to God through Jesus Christ. Thus, the Health Board seeks to provide exemplary health care with genuine compassion and with overriding purpose of evangelical witness.

## Introduction

By the end of 2006, six of the ten provinces of Cameroon benefited from the services of the Cameroon Baptist Convention Health Board (CBCHB). It comprises 3 hospitals, 25 integrated Health Centres, 40 primary Health Centres, Pharmaceutical procurement and distribution, a Private Training School for Health Personnel, and other critical health services for a population base of about 6 million people. CBCHB equally has a comprehensive HIV and AIDS program (ACP) with several components. In order to appraise performance, data for some key variables is disaggregated for the three hospitals and 25 other institutions.

**Table 1 - Bed Capacity**

Hospital	General Medicine	Maternity	Paediatric	Surgical	Total	%
BBH	123	43	44	43	<b>253</b>	24.0
MBH	145	24	26	50	<b>245</b>	23.3
BHM	17	17	6	6	<b>46</b>	4.4
Other Institutions	310	146	48	5	<b>509</b>	48.3
<b>Total</b>	<b>595</b>	<b>230</b>	<b>124</b>	<b>104</b>	<b>1053</b>	100.0

The three main hospitals have 544(51.7%) of the total 1053 beds in CBCHB health institutions, with a majority (24%) of the beds found in BBH while just 4.4% are available at BHM which is still new. The remaining 48.3% is unevenly and sparsely distributed among the other institutions. It is important to note that bed capacity is a function of available space.

**Table 2 - Staff Strength of CBCHB**

<b>Total</b>	<b>403</b>	<b>536</b>	<b>91</b>	<b>459</b>	<b>1489</b>
<b>%</b>	<b>27.1</b>	<b>36.0</b>	<b>6.1</b>	<b>30.8</b>	<b>100.0</b>

The overall staff strength for all CBCHB Health facilities is 1489 at the end of 2006; 1030 (69.2%) of whom are in the three main hospitals (Table 2). Casual/other staff influences this figure. They vary depending on ongoing construction projects. Also the reported figure does not include staff that provides other support services at the Health Services complex, LAP Bamkikai and the CBCHB central administration.

**Table 3 - Admissions in BBH, MBH, BHM and Other institutions**

<b>Hospital</b>	<b>Maternity</b>	<b>Paediatric</b>	<b>Surgical</b>	<b>Medical</b>	<b>Total</b>	<b>%</b>
MBH	737	1,415	7,569	2,951	12,672	<b>36.3</b>
BBH	1,179	1,305	1,386	2,648	6,518	<b>18.67</b>
BHM	476	898	446	898	2,718	<b>7.786</b>
Other Institutions	3,017	2,522	80	7,384	13,003	<b>37.25</b>
<b>Total</b>	<b>5,409</b>	<b>6,140</b>	<b>9,481</b>	<b>13,881</b>	<b>34,911</b>	<b>100</b>

The total number of admissions at the end of 2006 stood at 34,911. More than half (21,908, 52.4%) of this number was recorded in the three main hospitals. It is also clear that MBH admitted more (36.3%). This is the expected trend owing to the fact that this facility serves more as a referral.

**Table 4 - Out Patient Attendance by Age Group and Gender**

Age Group	Gender		Total	%
	Male	Female		
16.-44	98,273	110,806	209,079	51.7
45.+	35,867	58,854	94,721	23.4
1.-5	20,591	18,311	38,902	9.6
6.-15	18,352	19,237	37,589	9.3
< 1	12,440	11,577	24,017	5.9
<b>Total</b>	<b>185,523</b>	<b>218,785</b>	<b>404,308</b>	100.0

From the above table, it is evident that out patient attendance for CBCHB's health institutions varies with age. 75.1% of the total outpatients seen in all CBCHB Health institutions are in the age group 16 years and above while 24.9% are less than 16 years. This is consistent with the overall population distribution

**Table 5 - Out Patient Attendance in the three hospitals and other institutions**

Hospital	OPD ATTENDANCE	%
BBH	66,465	16.4
BHM	53,346	13.2
MBH	52,559	13.0
Other Institutions	<b>231,938</b>	57.4
<b>Total</b>	<b>404,308</b>	100.0

Disaggregating outpatient attendance for the 3 hospitals and other institutions, it is observed that BBH reported the highest (16.4%) outpatient attendance while MBH reported the least (13%). This is the expected trend attributed to the fact that the population that uses MBH on outpatient basis only is small compared to BBH. Most patient seeking services at MBH are referred or have chronic conditions and end up being hospitalised.

**Table 6 - Five Health Centres with Highest/Lowest Out Patient Attendance**

From table 7, it is evident that more patients as one would expect utilised the pharmacy (53.7%) services and followed by Laboratory (28.2%) services. The X-Ray, Ultrasound and PT department saw the lowest number of patients relative to all other departments
